PROJECT

Web Streaming Film (NFlix)   nflix.kajicode.my.id
A streaming platform with a high-quality collection of latest movies and daily updated series. Enjoy unlimited viewing on various internet connected devices. Integrated CRUD features, Laravel and Bootstrap based responsive design.

Movie Database   ziyad1412.github.io/Frontend_Web
A web application built using React technology, which focuses on displaying up-to-date information about the latest, popular, and current movies in theaters. The app is designed with an intuitive and responsive interface, allowing users to easily explore and add information about favorite movies.

Web Covid ID   ziyad1412.github.io/Covid-App
A website application built using React technology, which displays information about COVID-19 in Indonesia and the world presents actual data on the number of cases, the number of deaths, and the number of patients who recovered from the Covid virus.

Depok Health GIS   sig-kesehatan-depok.kajicode.my.id
A website project that combines Laravel and React technologies to create a Geographic Information System (GIS) that aims to map health services in Depok City. With an integrated approach, this project provides access to the public to find and understand important information about various health places, such as hospitals and health centers, in the Depok area. The project provides an interactive and informative interface.
